Smokefree Lancashire

Smoking is the leading cause of health disparities that continues across generations through addiction and familiarity. Children in households where adults smoke are more likely to smoke themselves. Let's acknowledge that smoking is not a mere lifestyle choice but a serious addiction. By collaborating with Primary Care Networks and key partners we can identify and prioritise effective, population-level interventions to target the estimated 131,000 smokers in Lancashire to deliver personalised treatment.

TELL US YOUR THOUGHTS

We are keen to listen and respond to any feedback or questions you may have, and have set up a dedicated mailbox where you can email us any questions smokefree.lancs@cgl.org.uk during this time.

If you are a health professional and would like to refer someone 12 years or over, get in touch:
